An Experience Review in using JVSG: CCTV Design Software by Engr Charles Joshua M. Labtang

Technology has advanced rapidly in 20th century. It offered various advantages and disadvantages. Security,that is only one of the many services it offered. Thanks to JVSG CCTV Design software, this generation can now feel a sense of being safe may it be in our home or offices to name a few.

This advanced software have been ECONOMICAL, to start with. Techie people can now plan where to place the CCTV cameras inside a building without buying the actual materials! You can import a Floor plan of a building to this software and there, you can start planning with length of wires/transmission media to be used, placement of camera plus the kind of camera that is suitable for that certain building given its surroundings. Speaking of surroundings, this software has built-in figures and structure that represents real-life scenarios. Talk about a person holding a Gun! Furthermore, the software has advanced features that offer how the CCTV coverage would look like in real-life. Given a certain distance from the camera, the object will either be recognizable or not in real-life setting. Last but definitely not the least, the JVSG CCTV Design Software presents its feature in a PROFESSIONAL look in a way that normal citizen would understand. Personally, this software is 10 of 10 in that aspect. Despite of all its advanced features presented, it appears very simple in much necessity in the eyes of customer availing the services of designer. How ironic right?

Overall, this software is a breakthrough in the field of Security and Monitoring in all settings and scenarios in this century!
